

Editorial

We are happy to announce the publication of this issue (June 2015) of Current Indian Eye Research. This issue covers wide spectrum of topics

Corneal blindness is an important cause of preventable blindness especially in Gangetic West Bengal wherein soil contains a high amount of fungi. We publish one article compared the efficacy of topical Natamycin with topical Itraconazole in mycotic keratitis. Therapeutic keratoplasty remains a viable option in terminal cases of infectious keratopathies. We publish one article highlighting the role of therapeutic keratoplasty in non-responding corneal ulcer cases.

Good old entity of glaucoma has been revisited comparing Goldman applanation with air puff tonometer. Another article deals with how corneal endothelium reacts to raised intra ocular pressure in acute angle closure glaucoma.

Magnitude of primary posterior capsular magnification encountered in patients undergoing cataract surgery has been discussed in this issue.

Readers will find interesting image gallery in a case of bilateral optic atrophy in pituitary macroadenoma. History of Ophthalmology is revisited as in earlier issues.
